

## Behind the Scenes with **Salih**: How Teamwork and Technology Shape His Daily Work

**"Be open from the start" Salih on teamwork, technology and insights into his daily work**  
For several years now, Salih has been part of the company. We spoke with him about his experiences, advice for new colleagues and his very personal perspective on machines, jewelry and what makes his workday so diverse.

### **Salih, what advice would you give to a new colleague starting out?**

In the beginning, just be open and don't be afraid to ask questions. We have a team here that is always ready to help. And patience is important too, you learn most things step by step, and after a while, the routines just become second nature.

### **Which machines have been added during your time here and do you have a favorite one?**

Several new models have been introduced over the past few years, but my favorite is the VPC pure. It's modern, versatile and gives me the most satisfaction when using it, you can really feel the difference.

### **Does jewelry play a role in your everyday life, do you wear it yourself or pay special attention to it?**

I don't wear jewelry myself, but I find the process of how jewelry is made extremely fascinating. The combination of craftsmanship, technology and creativity is what excites me most.

### **How would you describe your work in the company and how does it differ when you're with customers or partners on-site?**

At the company, the work is very technical and structured, it's about testing, processes, and planning. On-site with customers or partners, it's more direct, personal and often spontaneous. There, you're both a problem-solver and a point of contact at the same time, that's what makes the job so varied.

*Through his insights, Salih shows how openness, teamwork and a passion for technology come together and why the mix of structure and spontaneity makes his work so engaging.*
